

# THE HOLE NEWS

## JANUARY 1995

January 1995

Volume 11 Number 1

## The monthly publication of the Permian Basin Speleological Society

"The Hole News" is edited on 80486 40 MHz IBM personal computer utilizing Microsoft Publisher Version 2.0 desktop publishing program. The editors will accept 5 1/4 and 3 1/2 floppy disks with \*.txt, .pub, .rtf, .doc, .wps, and .wri formats for trip reports and \*.bmp, .pcx, and .cdr formats for graphics. However type or handwritten submissions are also

"The Hole News" is the monthly publication of the Permian Basin Speleological Society. Articles and cartoons maybe reproduced by cave oriented publications that exchange newsletters with PBSS, as long as proper credit is given to the author. Items for this newsletter can be sent to the Chief Editor, "The Hole News", c/o Bill Bentley, 400 Eastwood Drive, Midland, Texas 79703-5308. Regular membership dues are only \$10.00 and includes one voting right, associate membership is \$ 5.00 and does not include a newsletter. Dues should be sent to PBSS Treasurer /Secretary c/o Walter Feaster, 4307 Harvard, Midland, Texas 79703. If you're interested in caving or even if you think you might like to try it, the contact Noel Pando at (915)-523-9294. Or if you are not from this area and some how through circumstances beyond you're control or ours found a copy of "The Hole News" then you should contact the National Speleological Society at 2813

### From the Editor:

The PBSS starts with the eleventh year now and with a promise of many more to come. I got a 1080 Mega-byte hard drive for Christmas and had to completely redo the entire system. So after many hours of work I should be able to put out another newsletter for the club. Walter is looking for some help with a IRS form 501C3, so that we can achieve a non-profit status. Some PBSS members owe dues....read on....

Bill

### Next Meeting:

The next meeting of the Permian Basin Speleological Society will be on January 10, 1995 at 7:00 PM in the meeting room at Murry's Delicatessen. Murry's is located at 3211 West Wadley. If you need directions then call Walter Feaster at 699-7049 for more information. The meeting starts at 7:00 PM more or less and the usual caver gossip and eating starts at 6:30 PM, however this is not required. Pig chasing is optional. So, see you at the meeting! Ken bring your snow shoes.

### The following Cavers owe dues for 1995

Tom Brannon	Larry Glasson
Jon Brown	Kim Gray
Don Carlton	Gary Harter
Rick Day	Tom Hill
David Eddy	Allen Laman
J.D. Fincher	Rose Laman
Richard Fincher	Bill Sawyer

### Lesia Whidden

This will be your last issue of the PBSS newsletter until your dues are received by Walter our Treasurer. Please make checks payable to Walter Feaster. Thanks!

*Our editor (Mr. Bill) has asked for someone to write a safety corner for our PBSS news letter. I have decided to take up the challenge. Anyone wanting to write or contribute to the article may do so. We appreciate your thoughts and-ideas on this subject.*

For the first article in the PBSS Safety Corner we should start at the beginning. A very simple rule of safety for caving is the Rule of Three's. I have found that the Rule of Three's for caving is a good philosophy to follow.  
 RULE ONE . Never go caving by yourself. Have a minimum of three people on any cave trip. If one person gets hurt the other two can help the injured to

safety. Or one can stay with the injured person and the third person can go for help. The possibility of all three cavers getting hurt is very remote.  
 RULE TWO. Before you leave home on your big cave adventure, tell at least three people where you are going, what cave you are entering, and when you will be back. You can tell family members, co-workers, or neighbors. If no one knows where you are, they will not know where to look.  
 RULE THREE. When entering a cave always carry at least three reliable light sources. These light sources can be flash lights, carbide lights, candles, light sticks, or cigarette lighter. Even the sparks from an empty cigarette

lighter can get you out. If you lose your lights in a cave, you might as well sit and wait for someone to come and get you. A cave is one of those places where the sun does not shine. Caving can be a dangerous activity. If you think before you act and be prepared for the unexpected, caving can be a very rewarding and pleasurable experience. Whatever you may do in everyday life or caving, always remember Murphy's Law.

Cave most excellently,

---

## Lechuguilla Cave Advances on U.S. and World Lists of Long Caves

Copied directly from the *Speleospace* December issue, from a NPS news release by Bob Crisman

Lechuguilla cave in Carlsbad Caverns National Park, New Mexico has advanced from fourth to third place on the list of longest caves in the United States, and from seventh to fifth on the world list.

An expedition into the cave that concluded October 23rd, 1994 brought Lechuguilla Cave's official length to 79.06 miles, which is more than 2.5 times the current mapped length of the park's famous Carlsbad Cavern.

Lechuguilla Cave also remains the deepest limestone cave in the U. S. at 1,606 feet deep, although a lava cave in Hawaii (Kazumura Cave) is deeper at 2,111 feet.

Expeditions into Lechuguilla cave scheduled for the remainder of 1994 include a surveying and mineral inventory trip November 19-27, a surveying and exploration trip December 3-11, and a science trip December 12-17.

The science trip will be a follow-up visit by the Mars-study team that made their first trip into the cave in April 1994. The December trip will include a U.S. Geological Survey scientist, three NASA scientists, two scientists from the University of New Mexico and University of Massachusetts, and several technical support personnel.

Caves in the U.S. that are longer than Lechuguilla Cave include: (1) the Mammoth Cave system in Kentucky, which is about 350 miles long; and (2) Jewel Cave in South Dakota, which is a little over 100 miles long.

## TEN YEARS AGO IN THE PBSS BY BILL BENTLEY

---

January 1985 found the PBSS monthly publication the "SPYLUNK" with a very good cover sheet hand drawing by Bill Greenlee of Walt Zuliani negotiating the breakdown passage in Border Cave, Greenlee was serving as Secretary-Treasurer at that time. Tony Grieco was President and the regular monthly meeting was held at the home of Debbie Wolfe.

The PBSS had recently been to Amazing Maze Cave and Bill Bentley and Coy Coston did some blasting and gate construction to the entrance, a trip report was submitted by Bill Bentley. Other trip reports were submitted by Pat Copeland on a trip to Sidewinder Well Cave (Squiggles) and by Bill \_\_\_\_\_ley about a trip to Cottonwood Cave.

The PBSS was planning to visit Langty Lead, Three fingers, Lake, Spider, Hells Below, Black, Powell, and the Pinks Caves over the following six months and published a calendar to plan it out.

The group of cavers were very active and kept an interest in caving throughout the Southwest putting fourth the foundation by which our club still exists today.

---

**THE TEXAS CAVER  
WANTS YOU**

Deadlines for the March, 1995  
issue are January 15, 1995.

Send your articles, trip reports,  
cartoons, photos, and general  
comments to Noble Stidham,  
P.O. Box 1094, Lubbock, TX 79408

The PBSS would like to welcome new members  
Dutch Carouth and Mr. & Mrs James Benson to our  
club. If you see them give them a big PBSS  
welcome!

**PBSS Officers 1995**

President:

*Noel Pando*

Vice-president:

*Gralin Coffin*

Secretary/Treasurer:

*Walter Feaster*

**HEY JOE ! YOU WERN'T KIDDING WHEN YOU  
SAID THIS WAS A HARD LIP TO NEGOTIATE!**

## Brainbuckets & Bad Hair Days

It continues to be a wonder to me to see the casual attitude many cavers have towards preventing a catastrophe. That may be because they have never had a catastrophe fall on them. Each of us needs to reexamine some of the things we take for granted. For example: "my hard hat will protect my hard head."

When I first got into caving it was with a 1950's style metal hard hat borrowed from a roustabout. It was highly impact resistant, but with a carbide lamp mounted on it, the brim cast a wide shadow at your feet. If

I looked down to see where I was going, my hat would fall off and the carbide light would go out. A few minutes of grubbing around in the dark was usually sufficient to find the separated aluminum hat and brass lamp. Putting on that 2 pound hat and standing up to relight the lamp sometimes caused temporary deafness when I collided with one of those dripping rock things hanging from the ceiling.

Only a couple of trips were enough to convince me to purchase a brand new plastic hard hat and saw the brim off of it so I could see where I was going. That arrangement worked for a few months, but I kept getting headaches from the bolts that held the lamp bracket to the hard hat and the whole arrangement was still front heavy and likely to slide down on my nose when looking over a drop.

Then came the new speleocatalog with a listing of helmets approved by the Mine Safety Committee or some Alpine Mountain Climbers Association. I never had much interest in shoveling coal and didn't plan on visiting the hills of France, so I ordered one of that catalogue company's private label helmets made to their specifications "especially for caving."

A week later the UPS driver arrived with my brand new \$17 custom designed blue caving helmet complete with optional chin strap and a fancy bat emblem molded into the side. Over the next few years that blue helmet got photographed in half of the caves of the Guadalupe Mountains. It was comfortable, light weight, had a molded in lamp bracket and a suspension with a back strap

that kept it on my head instead of on my nose. I guess I would still be happy with that helmet if I hadn't stopped off to tour Sentinel Ridge Cave while we were headed for a grand exploration to the bottom of Sentinel Cave. Only ten feet from the entrance and seven feet underground, I touched the ceiling and was instantly planted on the floor with about 250 pounds of limestone sitting on my head. It hurt! I flopped around like a hooked fish and popped out of what was left of that helmet. The entire bracket had been torn off but the carbide lamp was laying on the other side of the rack from me and still burning. Rick Day squeezed back through the entrance to see what the big kur-thump was and nearly had a heart attack when he saw that blue helmet wadded up only 2 inches thick under that rock and my arm poking out around the side.

At the hospital in Carlsbad, the sheriff's deputy kept coming in every ten minutes to ask me if a rock had really fallen on me because he really thought this gang of crazed cavers had beaten my face to a bloody pulp. It was about then I began to think about what I really should wear for a caving hat.

Nowadays you will find me wearing a Petzel Ecrin helmet but only because I cannot find a Joe Brown or equivalent with its side impact protection that will fit a long oval head [not a joke: that happens to be an actual hat size for Stetsons]. The purpose of this article is not to be a definitive guide to selecting a caving helmet, but to be a safety reminder to you. REMEMBER: Before a catastrophe befalls you [or befalls on you] be sure that the quality of your brainbucket is directly proportional to the value of its contents.

If you are as hardheaded as me, I still have

for sale cheap a heavy duty metal caving hat which will double as a coffee pot.

Chuck Anderle
